C-1 Enterprise Architecture Support

1. Introduction

The Technology Strategy & Innovation Office (TSIO) supports the Judiciary with strategic guidance, technology development, technical standards, policies, planning, and significant research and development efforts. The mission of TSIO is to deliver technology solutions to help the Federal Judiciary reduce costs and risks, improve overall effectiveness and efficiency of judicial operations by providing experimentation, validation, and concept development in support of business requirements. TSIO has adopted Agile Scrum and uses Agile principles to carry out best software development practices in the Software Development Life Cycle (SDLC).

2. Background

TSIO requires support to sustain, enhance, and evolve the Judiciary's Enterprise Architecture (EA) Program to enable informed decision-making and increase the business value and impact of IT investments. A Judiciary EA Program can play a key role supporting the Judiciary strategic goals and its supporting AO objectives, inclusive but not limited to "Enhancing the Security, Efficiency and effectiveness of the Judiciary" as well as "Improving the Organizational Maturity of the AOUSC".

The Judiciary's business operations and its technology architecture are constantly changing, and the pace of change is increasing. EA will enable this transformation to be effective, be delivered efficiently and ensure that technology is focused on empowering the business and not technology for technology's sake.

These evolving IT investments need to be aligned with and yield measurable business value to the Judiciary enterprise, the EA Program requires continued sustainment and refinement to ensure evolving IT investments remain aligned with Judiciary business needs and strategic objectives.

3. Scope of Work

The Judiciary requires contractor support to sustain and enhance its established Enterprise Architecture Program. Support includes maintaining and evolving EA governance, standards, architecture, repositories, roadmaps, portfolio information, stakeholder engagement, and related EA services across the Judiciary. The

Contractor shall create and keep EA artifacts, standards, governance, and related documentation current and aligned with judiciary business capabilities, technology investments, and courtroom technology needs.

4. Requirements

The Contractor shall provide support services to sustain, enhance, and continuously improve the Judiciary's Enterprise Architecture Program. Work shall produce a coherent, governed technology ecosystem that improves investment alignment, reduces duplication and technical risk, increases interoperability, and enables faster authorization of systems built to approved patterns aligned with JISF.

Support focuses on the operation, maintenance, refinement, and measurement of EA governance, standards, architectures, repositories, roadmaps, portfolio information, and related services. Related activities include, but are not limited to:

- Support the operation, maintenance, and continuous improvement of the EA Standards lifecycle process, including standards recommendation intake, development, review, approval, publication, communication, and periodic review.
- Support the Judiciary IT Standards Program: draft and maintain individual standards through the approved lifecycle (intake, development, peer review, judiciary-wide review, endorsement, and approval); facilitate working groups; and support review process and comment adjudication through publication.
- Lead research, development, enhancement, and publication of comprehensive principles, architectures, reference models, and standards to guide national development efforts and ensuring alignment of the IT architecture and planning with the Judiciary business goals.
- Monitoring and providing input into state-of-the art IT developments/applications while staying abreast of key market indicators; and supporting adoption of approved enterprise and application frameworks.
- Modifying and developing IT plans and policies in response to new legislation, regulations, directives, and other guidance affecting the program.
- Providing oversight and management of the layout of technical standards for inter-related agency program offices, and court developers with responsibility for evaluating the impact of policy/guidance and development of new guidance to ensure impacts are addressed and IT technical standards, plans, and policies are in compliance with local and national application development standards. This includes working with all levels of management/staff as well as court and external customers/contacts in local and national program offices to determine gaps between the current and target application architecture; and developing plans for transition to target architecture.
- Supporting judiciary-wide architecture initiatives and working with diverse stakeholder groups to promote adoption of technical standards and best practices.
- Preparing and providing input into reports and other high-level IT documents delineating implications, impediments, making recommendations, and presenting solutions to eliminate redundancy and support management strategies.

Governance

- Support the ongoing operation and enhancement of EA program governance, including the Enterprise Architecture Board (monthly meetings, quarterly CIO reporting, and expanded advisory role).
- Maintain the EA repository as the authoritative source for architecture artifacts, including organization, version control, access for authorized stakeholders, and intake of new and updated products.
- Support the operation of the Architecture Review Board (ARB) as a review gate before major investment or contract decisions.
- Support a formal exception process with compensating controls and time-bound conditions and produce consolidated architecture-review recommendations to the CIO's Management Team.
- Coordinate architecture review with IT investment, acquisition, security architecture, and data governance.
- Maintain, refine, and enhance architecture principles, the Technical Reference Model (TRM), Application Portfolio Management (APM) views, enterprise technology roadmaps, and technology lifecycle plans so those views can support government TCO and cost analysis.
- Identify, prioritize, and track high-risk technical debt items and develop and track approved remediation plans, prioritized by business-capability criticality and technology-lifecycle risks.
- Produce and maintain metrics on standards and pattern adoption, architecture compliance, and reduction of unsupported technology, and support/enhance the EA repository as the authoritative source for these metrics and related architecture information.
- Support cross-office coordination, dependency management, and continuous improvement of the standards lifecycle process.

4.1.1. Communication Specialist Support Services

The contractor shall provide technical writing and communication support for the Enterprise Architecture (EA), Courtroom Technology (CT), and IT Standards programs. The support services include creating, reviewing, organizing, maintaining, and enhancing documentation related to EA, Courtroom Technology, and IT standards, such as policies, standards, best practices, reference guides, technical specifications, training materials, process manuals, procedures, architecture artifacts, and other relevant documents; and resolving comments received in documents and creating presentations and other materials for briefings with senior Judiciary management and governance bodies including the tasks detailed below.

The contractor shall perform the following tasks including but are not limited to:

1. Collaborate with IT Standards Team members, Enterprise Architects, Solution Architects, subject matter experts, and other stakeholders to identify, gather, and validate information on various IT standards, best practices, policies, and components of the enterprise architecture program.
2. Develop and maintain clear, concise, and accurate documentation, such as reference guides, technical specifications, process manuals, architecture overviews, system specifications, process maps, data flow diagrams, PowerPoint presentations, user manuals, and training materials that are tailored to both technical and non-technical audiences.
3. Ensure consistent terminology, style, and formatting across all IT standards documentation, including maintaining and updating templates and style guides and developing new templates/guides as needed.

4. Continuously update documentation to reflect changes in IT standards, technology, regulations, best practices, user feedback, and lessons learned while maintaining proper version control, including drafts and final editions.
5. Manage the documentation repository, ensuring easy access to, version control, and proper organization of documents.
6. Assist in the preparation and development of presentation materials and reports for various audiences, including stakeholders, project teams, and executive leadership.
7. Review and provide feedback on existing documentation, suggesting improvements, making editorial changes, and identifying areas that require clarification or revision.
8. Ensure contractors' employees performing these services are informed about new technologies, trends, and best practices within the IT industry, including an understanding of cloud service providers and emerging technologies, to ensure cutting-edge knowledge and practices are reflected in the documentation.
9. Collaborate with cross-functional teams to ensure documentation aligns with project requirements and standards.

4.1.2. IT Project Management Support Services

The contractor shall provide IT Project Management (PM) support for the general EA program and the IT Standards effort.

The contractor shall plan, execute, monitor, and close projects and ongoing program activities while ensuring the objectives are met on time, within scope, and within budget; coordinate and communicate with cross-functional teams, stakeholders, and vendors; and manage and communicate project and program risk to the EA Team Lead and senior executives.

The contractor shall perform the following tasks, including but are not limited to:

1. Developing project plans, including defining project scope, objectives, and deliverables, involving all relevant stakeholders.
2. Creating and maintaining comprehensive project documentation, such as project plans, risk register, communication plans, and change requests.
3. Allocating and balancing resources and tasks and promoting effective communication and collaboration.
4. Maintaining clear communication with project stakeholders and team members and working closely with Project Lead.
5. Maintaining project schedules, identifying dependencies and critical paths, and adjusting as needed to ensure the timely completion of project milestones.
6. Monitoring and tracking project performance, identifying issues or deviations from project plans, and implementing course corrections as necessary.
7. Effectively manage project risks, proactively identifying potential issues or obstacles, and implementing risk mitigation strategies.
8. Applying change management processes, ensuring any changes to project scope, schedule, or budget are documented, approved, and communicated appropriately.
9. Maintaining clear, consistent communication with project stakeholders, keeping them informed of project progress, risks, and issues.
10. Assisting with stakeholder management and project expectations.
11. Facilitating project status meetings, steering committee meetings, briefings, and other project-related meetings.
12. Continually evaluate the team's performance, identify areas of improvement, and recommend corrective actions for the Project Lead.
13. Coordination and tracking of Enterprise Architecture Board and ARB-related activities/packages.

14. Tracking of high-risk technical debt remediation plans and standards adoption metrics where those are managed as program efforts.
15. Support for the cadence and deliverables of the standards lifecycle process.

4.1.3. Security Architecture Support Services

The contractor shall provide Security Architect support as the IT Security and JISF subject-matter expertise to the Enterprise Architecture Division. The contractor shall support the government technical lead's coordination with IT Security Office on security architecture, support IT Security standards under development, document and map security architecture into the EA repository, and keep the EA view of the security roadmap current in the repository. The contractor may also support technology and application assessments for compliance with JISF and other security standards.

The contractor shall perform the following tasks, including but are not limited to:

1. Serve as the JISF SME to the EA Division, and advise on JISF alignment of EA standards, reference architectures, and reviews.
2. Prepare EA security views, IT security analyses, and briefing materials as directed.
3. Document security architecture and map it into the EA repository, including approved PQC-related architecture artifacts.
4. Support IT Security standards being developed.
5. Maintain security-related metrics used in EA and standards dashboards.
6. Review and brief EAD on emerging security threats, technologies, and federal security guidance as they affect EA products.
7. Support technology and application assessments for compliance with JISF and other security standards, and record results in the EA repository when directed.
8. Maintain the EA view of the security roadmap in the EA repository

4.1.4. Solution Architecture Support Services

The contractor shall provide Solution Architect support in creating, maintaining, and updating reference architectures and in providing guidance to solution architects across the judiciary. The contractor shall support the government technical lead on cloud architectures, modernization, and cloud-migration efforts, review and assess solution architectures as directed, and keep technical-architecture views current in the EA repository.

The contractor shall perform the following tasks including but is not limited to:

Technical architecture and reference architectures:

1. Create, maintain, and update reference architectures and reusable design patterns for use by project and program teams.
2. Support the collection, mapping, validation, and presentation of the technical architecture domains.
3. Maintain and update current-state technology architecture and related standards.
4. Maintain and refine target-state technology architectures and recommend transition approaches.
5. Document technical architecture in diagrams, roadmaps, and other artifacts, and map those products into the EA repository.

Guidance and review:

1. Provide guidance to solution architects across the Judiciary on approved reference architectures, patterns, standards, and TRM building blocks, to promote consistency and interoperability.
2. Review and assess solution architectures and provide findings for architecture review.

3. Serve as technical SME for approved standards and reference architectures.
4. Document and share best practices for using approved solutions and standards.

Cloud, modernization, and standards support:

1. Apply EA cloud architectures and standards (produced under 4.1.5) when providing guidance and when reviewing solution architectures.
2. Support modernization and cloud-migration efforts by reviewing solution architectures against approved cloud patterns,
3. Support the IT Standards lifecycle: research, review, and maintain standards, and provide specifications and guides for approved standards.
4. Stay current on federal technical standards such as NIST, FIPS, FedRAMP, FISMA, and federal cloud guidance as they apply to EA products.

4.1.5. Cloud Architect Support Services

The contractor shall provide Cloud Architect support for sustaining cloud architecture, standards, and guidance across the Judiciary. The contractor shall work as part of a team, to assess the current cloud implementations and migration plans and recommend changes to the judiciary's cloud computing strategy, architectures, and roadmaps. The contractor shall develop and maintain cloud architectures, standards, roadmaps, and guidance. The contractor's cloud architecture support shall ensure that the cloud environment is efficient, secure, compliant, and aligned with the judiciary's mission and objectives.

The contractor shall perform the following tasks:

Cloud Strategy Development:

1. Assess, develop, and maintain the judiciary's cloud strategy, to align with the overarching IT strategy and business objectives.
2. Maintain and update the cloud architecture implementation and migration strategy documentation.

Cloud Architecture Design:

1. Assess, document, and support cloud designs including infrastructure, networking, security, data management, and application components.
2. Review and recommend the optimal cloud deployment models based on the judiciary's needs and compliance requirements.
3. Create architecture diagrams, technical specifications, and design documents.

Cloud Migration Architecture, Planning, and Monitoring:

1. Design the architecture, develop a migration plan, and monitor the migration of applications and data to cloud environments.
2. Organize meetings and collaborate with development teams to ensure applications and organizations are cloud-ready and optimized for performance, security, and scalability.
3. Assess and document the implementation of cloud infrastructure components, such as virtual networks, storage, and compute resources.
4. Identify the optimal cloud deployment models based on the judiciary and application needs and in compliance with the migration strategy and provide recommendations.

Security and Compliance Assessment:

1. Evaluate and ensure the cloud environments meet federal security and compliance frameworks, such as FedRAMP, FISMA, and NIST guidelines.
2. Review and confirm that the cloud environments meet the Judiciary IT Security Framework.
3. Assess the effectiveness of security controls, access management, and data encryption implementations.
4. Examine cloud security audits to identify potential risks and implement strategies to address and mitigate these risks.

Cloud Operations and Governance:

1. Assist and support the government team lead (GTL) with the ongoing operations and refinement of cloud governance, including policies, procedures, and best practices.
2. Continuous monitoring and optimization of cloud performance, availability, and cost-efficiency.
3. Evaluate and support the existing automation and orchestration tools to streamline cloud operations and management.

4.1.6. Audio Visual Systems Architect Support Services

The contractor shall provide Audio Visual Systems Architect support for sustaining and enhancing courtroom technology reference designs, standards, design guidance, and integration architecture across the Judiciary. The contractor shall work as part of a team to assess the current A/V systems and recommend changes to the judiciary's A/V technology strategy, architectures, roadmaps, and blueprints. The contractor shall develop and maintain courtroom technology reference designs, standards, recommendations, and implementation guides that courts can procure and implement for traditional, remote, and hybrid proceedings; perform structured testing and verification in the courtroom lab; and support training. Designs shall reduce the physical footprint, complexity, and total cost of ownership, and improve reliability, accessibility, and usability. The contractor's A/V systems architecture support shall ensure that the judiciary's courtroom technology is efficient, user-friendly, secure, compliant, and aligned with the judiciary's mission and objectives.

The contractor shall perform the following tasks including but are not limited to:

Technical Expertise and Courtroom Technology Management:

1. Serve as SME for all audio and visual equipment technical aspects in a courtroom environment, including sound systems, video displays, control systems, evidence systems, and networking technologies.
2. Conduct technical research and evaluate courtroom technologies for implementation and improvement.
3. Manage and operate the courtroom lab to support demonstrations, training, testing, and validation of a/v technologies and operations.
4. Perform A/V system testing and verification.
5. Develop new and maintain existing training materials and conduct training sessions on courtroom technologies, configurations, and implementations.

Courtroom Technology Design and Standards:

1. Develop and document audio and visual system architecture for courtroom environments.
2. Create detailed plans and specifications for system layouts, equipment placements, and integrations as needed.
3. Create installation and configuration guides for courtroom technologies as needed.
4. Create and maintain standards for audio and visual equipment and deployment in courtrooms as needed.

5. Continuously review and assess external standards that apply to courtroom operations and technology.
6. Maintain courtroom technology reference designs and related standards, and publish designs that courts can procure and implement.
7. Enable integration of courtroom systems with enterprise judiciary platforms where it has clear operational benefit.
8. Support courtroom technology policy changes and updates.

4.1.7. Data Architect Support Services

The contractor shall provide Data Architect support for assessing application data, maintaining data-architecture views in the EA repository, and supporting the team lead's work with the Enterprise Data Office on data strategy and data management. As part of a team, the contractor shall support data-security, access, integration, and interoperability architecture, monitor emerging data trends, and keep data artifacts current for architecture review and investment use.

The contractor shall perform the following tasks including but are not limited to:

Support to the government lead:

1. Support the government team lead's engagement with the Enterprise Data Office (EDO) by preparing EA data views, analyses, and briefing materials.
2. Serve as an EA SME on data strategy. Prepare analysis, options, and recommendations for the government technical lead. Maintain EA views that reflect the data strategy the government adopts.
3. Maintain EA data-architecture views and roadmaps that reflect EDO direction provided by the team lead.
4. Support EDO and stakeholder sessions to validate data needs and confirm what belongs in the EA repository.

Application data assessment and repository:

1. Assess applications and their data (sources, stores, flows, and quality) and document findings in the EA repository.
2. Map application data and interfaces into the EA repository as part of as-is and to-be architecture, including upstream and downstream dependencies.
3. Keep data-architecture artifacts current in the EA repository as the authoritative source for those views.

Integration, access, and interoperability:

1. Assess and document data access, integration, and interoperability patterns, including APIs and data services.
2. Recommend integration and interoperability architecture that project teams and the government lead can use.
3. Maintain data and API standards used in architecture review, in support of the government lead and the IT Standards process.

Data security support:

1. Support data-security and privacy efforts by reviewing policies, identifying data-related risks in architecture products, and providing findings to the government lead, cybersecurity, and development teams.
2. Note JISF and applicable federal requirements where data-architecture products are updated.

Emerging trends:

1. Monitor emerging data technologies and practices and recommend which ones warrant government-lead or EDO attention.

4.1.8. Applications Architect Support Services

The contractor shall provide Applications Architect support for creating, sustaining, and enhancing application architectures, designs, and standards across the Judiciary. The contractor shall work as part of a team to assess the current application landscape and recommend changes to the judiciary's application strategy, architectures, standards, and guidelines. The contractor shall maintain application architecture principles, design patterns, standards, roadmaps, and the application portfolio, and shall keep application views current in the EA repository. The contractor's application architecture support shall ensure that the applications and development environments are efficient, secure, compliant, and aligned with the judiciary's mission and objectives.

The contractor shall perform the following tasks including but are not limited to:

Application Strategy:

- 1. Assess, develop, and maintain judiciary application strategy and forward architectures.
 2. Develop and document the vision and goals for the judiciary's application environments, aligned with the judiciary's mission, goals, and objectives.

Assess the Application Landscape:

- 1. Analyze existing applications against the business capability map and application portfolio and recommend alignment improvements.
 2. Evaluate and assess the scalability, performance, security, and maintainability of the existing applications.
 3. Assess the as-is and to-be architectures of judiciary applications to include technical and business fit and compliance with enterprise architecture, standards, and the Technical Reference Model.
 4. Collaborate with security teams on security implications of application architecture.
 5. Support application and system assessment process: intake and prioritization; assessment of business alignment, technology fit, cloud readiness, risk, and cost; and publication of findings to the EA repository.
 6. Produce rationalization recommendations and track approved recommendations and status in the EA repository and the technical-debt register.
 7. Assess application compliance with relevant regulations and policies, including FISMA and NIST guidelines.
 8. Identify and document the overall structure and components of applications in the EA toolset, including system diagrams, data models, API specifications, and interconnects.
 9. Support the EA toolset and maintain the EA repository as the authoritative source for application-architecture artifacts, including data integration, enhancements, and metrics and compliance reporting.
 10. Define and document the interactions and interfaces between application components and external systems.
 11. Communicate architectural decisions and trade-offs to both technical and non-technical audiences.

Support Application Compliance:

- 1. Meet and collaborate with business analysts, project managers, and other stakeholders.
 2. Provide expert guidance and technical support on TSIO's application technologies by leveraging specialized knowledge and experience.
 3. Evaluate and recommend new technologies and trends to enhance the application architectures.

4.1.9. Business Architecture Support Service

The contractor shall provide Business Architecture support for sustaining and enhancing the Judiciary's business architecture and in assessing strategies, investments, initiatives, applications, and systems against business capabilities and value streams. As part of a team, the contractor shall sustain, validate, integrate, and enhance business capability maps, value streams, organization and stakeholder mappings, business information concepts, and related cross-mappings; use those artifacts to identify gaps, duplication, dependencies, and transformation priorities; and keep approved business-architecture content current in the EA repository for strategy, investment, portfolio, and architecture-review decisions. Business Architecture support shall remain outcome-focused and technology-agnostic and shall not duplicate project-level business analysis, detailed process redesign, or operational performance-management responsibilities unless directed by the Government.

The contractor shall perform the following tasks, including but are not limited to:

1. Sustain and enhance the Judiciary's governed business-architecture content, including the business capability map, value streams, organization and stakeholder mappings, business-facing information concepts (not data models owned under 4.1.7), strategy and initiative mappings, and the relationships among those artifacts.
2. Facilitate structured working sessions with business units and other stakeholders to validate definitions, ownership, scope, relationships, and supporting evidence for business-architecture artifacts, and resolve or document material discrepancies.
3. Conduct business-focused assessments of existing applications and systems against the business capability map and application portfolio to identify capability coverage, gaps, duplication, and misalignment. Coordinate with Applications Architecture support (4.1.8) on technical-fit and application-rationalization findings.
4. Translate business strategies, objectives, needs, and planned initiatives into architecture-relevant capability implications, gaps, dependencies, and requirements that inform target-state architectures, roadmaps, portfolio analysis, and architecture reviews.
5. Use value streams and supporting process analysis to evaluate how capabilities contribute to stakeholder outcomes, identify cross-functional gaps or inefficiencies, and recommend architecture-informed improvement opportunities.
6. Develop and recommend outcome and performance measures for value streams and capabilities, and apply the Government-approved capability-assessment method to support heat maps, prioritization, and progress measurement. The Contractor shall not assume ownership of agency-wide performance management.
7. Develop value-stream maps and, where necessary, supporting high-level process models or workflows; trace them to capabilities, stakeholders, organizations, information concepts, and relevant architecture standards.
8. Establish and maintain quality controls for business-architecture content in the EA repository, including required metadata, versioning, and relationship integrity.
9. Produce decision-ready business-architecture views, heat maps, assessments, and briefing materials tailored to executive, investment, portfolio, and architecture-governance audiences.

4.1.10. Onsite Support Requirements

As needed, the Contractor shall provide onsite support for call order activities. The purpose of onsite support is to facilitate collaboration with Government stakeholders, participate in hands on design and technology sessions, provide demonstrations or presentations that cannot be effectively performed remotely. Onsite support shall be coordinated in advance with the Government.

5. Meetings

5.1.1. Post Award Kick-Off Meeting

The Contractor shall participate in a kick-off meeting within five (5) business days of the BPA Call award date or other mutually agreed upon time frame. This meeting is considered overhead and is not a direct, billable Contract Line-Item Number. The kick-off meeting will be held virtually or at the Government's facility to: 1) Review the BPA Call and objectives; 2) Initiate communications between the BPA Call Contracting Officer's Representative (COR), Judiciary program office and the Contractor by introducing key task participants and identifying their roles; 3) Review administrative functions in the BPA Call and the prime contract as it pertains to reports, meeting, invoicing, work hours, and administrative functions not outlined in the BPA Call, such as dress codes, etc. 4) Meeting shall not be a forum to modify BPA Call terms, conditions, or prices. The contractor shall provide BPA Call Kickoff Meeting Minutes capturing all pertinent information (e.g., action items, etc.) discussed during the meeting.

5.1.2. Meeting Location

All meetings shall either take place at the Thurgood Marshall Federal Judiciary Building (TMFJB) located at One Columbus Circle N.E., Washington, D.C. 20544 or virtually using Microsoft Teams, unless otherwise approved in writing by the government program manager and the COR.

6. Deliverables

All written deliverables shall be submitted to the COR with an accompanying letter describing the deliverable product. The COR will accept or reject deliverables within five (5) business days from receipt. A deliverable is not considered acceptable until the program team lead and/or the COR's written approval is provided stating acceptance. If a deliverable is rejected, the contractor shall make corrections as specified and resubmit the deliverable to the program team lead and/or the COR within three (3) business days for review and approval. Unless otherwise stated, all deliverables and work products shall be produced using Microsoft Office Professional products.

6.1. Reporting

The contractor shall provide the following reports:

6.1.1. Monthly Status Reports

The Contractor shall prepare and submit Monthly Status Reports. Reports shall be delivered to the COR by the 10th calendar day of the month following the reporting period. This report shall accurately document the following:

1.
 1. Activities planned for the reporting period.
 2. Work and deliverables completed during reporting period.
 3. Status of ongoing activities including percentage of completion.
 4. Activities planned for the following reporting period.
 5. Problems or issues projected or identified.
 6. Alternatives and/or recommended solution(s) for identified or projected problems or issues.
 7. Summary of tasks performed (complete, done) in the SOW.

6.1.2. Final BPA Call Report

Upon completion of the task order's period of performance, or at the task order's termination, the contractor shall provide a final report to the COR. This report shall summarize objectives achieved, any significant issues, problems, and recommendations to improve the process in the future. The Final BPA Call Report is due to the COR NLT 7 days prior to the end of the BPA Call.

6.1.3. Delivery Schedule

The Contractor shall submit all written deliverables in accordance with the schedule in the table below. Reports shall be in Microsoft Word format and delivered to both the COR and TL.

Deliverable Description	SOW Reference	Acceptance Criteria	Deliver To	Authority to Accept
EA artifact update set	4, 4.1.8, 4.1.9.	Principles and technology positions are current and usable by project teams. Reference architectures and patterns are documented and internally consistent. As-is and to-be views cover business, data, application, and technology. Capability map and application portfolio are current to support investment decisions. Roadmaps and transition plans identify major dependencies.	TL, COR	TL, COR
EA repository current	4, 4.1.8	Authoritative catalog of EA artifacts is organized, version-controlled, and available to authorized stakeholders. New and updated artifacts from the period are in the repository. Metrics and compliance information can be retrieved from it.	TL, COR	TL, COR

Technical debt register with prioritized remediation plans (plans only)	4	High-risk technical debt items are identified and prioritized. Each high-risk item has a remediation plan with owner and status. Register is current for the period. Plans only; no requirement to execute remediations.	TL, COR	TL, COR
EAB / ARB review package and exception log.	4	Each board cycle has an agenda, review record, and consolidated recommendations to the CIO's Management Team. Architecture review is documented as an input to major investment or contract decisions, or a recorded exception. Exception log includes compensating controls and a time box.	TL, COR	TL, COR
Standards lifecycle support and adoption/compliance measures.	4	Standards work follows the existing formal development and approval process. Adoption, architecture compliance, and use of approved patterns are measured and reported for the period. JISF alignment is noted where standards or patterns are updated.	TL, COR	TL, COR
Courtroom technology package (reference designs and standards; design guidance, documentation, and training; lab	4.1.6	Reference designs and related standards are current and published so courts can procure and implement for traditional,	TL, COR	TL, COR

validation results; policy-update input).		remote, and hybrid proceedings. Design guidance, documentation, and training materials cover the work. Lab testing or demonstration results are included. Policy-update input is documented when policy is in play. Designs address footprint, complexity, TCO, reliability, accessibility, and usability. No install or implementation by the contractor.		
Cloud architecture, planning, and monitoring update (no migration execution).	4.1.5	Cloud architectures, standards, and guidance are current. Migration architecture and plans are maintained. Migration progress is monitored and reported. Recommendations are actionable. No migration execution by the contractor.	TL, COR	TL, COR
BPA Call Kick Off Meeting Minutes	5.1.1	NLT 5 business days after the meeting	COR	COR, CO
Monthly Status Reports	6.1.1	10th calendar day of the month following the reporting period	COR, TL	TL, COR, CO
Final BPA Call Report	6.1.2	7 Business Days prior to the end of BPA Call's period of performance or termination	TL, COR	TL, COR, CO

7. Place of Performance

Work performed under this BPA will be at the contractor's facility and within the bounds of Judiciary IT Security Guidelines or other relevant management or technical considerations.

Travel may be required in the performance of this BPA Call and must be coordinated with TL and COR. However, prior written authorization is required prior to travel commencing. Travel costs shall include transportation, lodging, meals and incidental expenses and any miscellaneous expense necessary to complete the tasks. Travel costs shall be based on Judiciary Staff Travel Regulations (JSTR). Travel costs shall be reimbursed, exclusive of any contractor profit and/or overhead costs, at amounts not to exceed the per diem rates in the JSTR as of the date costs are incurred. Local travel will not be reimbursed. Local travel is defined as travel within a 50-mile radius of the Thurgood Marshall Federal Judiciary Building (TMFJB), an individual court unit or an employee's main office locations.

8. Contract Type

This BPA Call will be a labor hour effort.

9. Period of Performance

One (1) year from date of award.
